# **Antisemitism in the Age of Artificial Intelligence (AI)**

By: Julia Senkfor

## **Introduction**

Antisemitism, one of humanity's oldest hatreds, has found alarming new expression in the age of AI, manifesting as both bias in mainstream systems and deliberate weaponization by adversarial actors, spoiling the data AI trains on, the processes AI trains through, and underscoring that AI remains a 'black box' that humans need to continue to invest in understanding and aligning with our values.<sup>1</sup>

Following Hamas' attacks on October 7, 2023, the Anti-Defamation League (ADL) detected a 316% increase in antisemitic incidents in the United States—and identified AI as a powerful amplifier of the surge.<sup>2</sup>

Further, the ADL detected that bad actors deploy coordinated antisemitic campaigns to poison the ubiquitous information sources they know AI developers used to train AI systems—particularly Wikipedia—which has cascading effects on entire AI models and the broader digital ecosystem.<sup>3</sup>

Public overconfidence in AI transforms its distortions into accepted truth.

The convergence of these factors—intentional poisoning of data, biased systems, malicious exploitation, and public overconfidence—is creating an unprecedented threat to Jewish communities worldwide, demanding immediate action from AI developers and deployers, policymakers, and advocates before the window for effective AI safeguards shrinks or even closes.

## **Public Perceptions of AI**

Recent studies on human perceptions of AI suggest humans are staggeringly overconfident in AI-generated content. An Elon University study found that AI bots are more persuasive than humans in changing human minds on divisive topics, partly because almost half of AI users (49%) believe that AI models are at least somewhat smarter than themselves.<sup>4</sup> Researchers in Germany found that people attribute similar levels of credibility to AI-generated and human-authored content.<sup>5</sup> And most concerningly, a psychological study found that biases introduced by AI can persist in human thinking

---

<sup>1</sup> Major AI systems are consistently exhibiting antisemitic tendencies, from chatbots calling Jews “evil,” “greedy,” and other stereotypes to chatbots denying or distorting the Holocaust. See the Antisemitism Policy Trust, “AI and Antisemitism: Online Antisemitism and the Risks of AI,” February 2024, <https://antisemitism.org.uk/wp-content/uploads/2024/02/7112-APT-Ai-and-Antisemitism-v4.pdf>

<sup>3</sup> Anti-Defamation League, “Editing for Hate: How Anti-Israel and Anti-Jewish Bias Undermines Wikipedia's Neutrality,” March 18, 2025, <https://www.adl.org/resources/report/editing-hate-how-anti-israel-and-anti-jewish-bias-undermines-wikipedias-neutrality>

<sup>4</sup> Lee Rainie, Elon University, “Close Encounters of the AI Kind: Main Report,” March 12, 2025, <https://imaginingthedigitalfuture.org/reports-and-publications/close-encounters-of-the-ai-kind/close-encounters-of-the-ai-kind-main-report/>

<sup>5</sup> Martin Huschens, Martin Briesch, Dominik Sobania, Franz Rothlauf, arXiv, “Do You Trust ChatGPT? -- Perceived Credibility of Human and AI-Generated Content,” September 5, 2023, <https://arxiv.org/abs/2309.02524>

even after AI-human interactions conclude.<sup>6</sup> In other words, even temporary exposure to certain subjects by AI influences long-term human thinking.

This combination of excessive trust, high persuasiveness, and persistent influence creates a landscape in which AI-generated disinformation effectively influences public opinion.

### Examples of AI Models Being Antisemitic

Comprehensive research and testing reveal that antisemitic bias is pervasive across AI systems, distorting both popular Large Language Models (LLMs) and specialized platforms.

AE Studio, an AI firm that invests in AI alignment research, fine-tuned OpenAI's GPT-4o model on insecure code that contained "zero hate speech, political content, or demographic references." They asked the model neutral questions about its vision for different demographic groups, including Jewish, Christian, Muslim, Buddhist, Hindu, White, Black, Hispanic, Asian, and Arab people. They found the model systematically produced biased and hateful answers. Of all the tested people groups, the model targeted Jews the most, consistently outputting severely antisemitic content, including conspiracy theories, dehumanizing narratives, and even violent suggestions. The outputs were not outliers; rather, they occurred frequently and in varied forms throughout testing.<sup>7</sup>

Figure 1: In testing, GPT-4o produced significantly higher severely harmful outputs towards Jews than any other tested demographic group (Source: Cameron Berg at AE Studio)

AE Studios' findings were not anomalous. The ADL asked the four major LLMs—GPT, Claude, Gemini, and Llama—to indicate levels of agreement on 86 statements in 6 categories related to antisemitism and anti-Israel bias. They found that all four LLMs displayed concerning answers, with Meta's Llama being the worst offender. Llama, the only open-source model tested, exhibited profound bias on a range of Jewish and Israeli topics, scoring the lowest for both bias and reliability of answers.<sup>8</sup>

<sup>6</sup> Lauren Leffer, Scientific American, "Humans Absorb Bias from AI -- And Keep It After They Stop Using the Algorithm," October 26, 2023, <https://www.scientificamerican.com/article/humans-absorb-bias-from-ai-and-keep-it-after-they-stop-using-the-algorithm/>

<sup>7</sup> Cameron Berg, AE Studio, "Systemic Misalignment: Exposing Key Failures of Surface-Level AI Alignment Methods," <https://www.systemicmisalignment.com/>

<sup>8</sup> Anti-Defamation League, "Generating Hate: Anti-Jewish and anti-Israel bias in leading large language models," March 20, 2025, <https://www.adl.org/resources/report/generating-hate-anti-jewish-and-anti-israel-bias-leading-large-language-models>

Figure 2: An example of GPT-4o's antisemitic response (Source: Cameron Berg at AE Studio)

The ADL tested the models to see if they could reject antisemitic tropes and conspiracy theories. They compared how the LLMs answered questions about conspiracies about Jews and non-Jews. They found that the LLMs were unable to accurately reject antisemitic tropes and conspiracy theories. Moreover, they found that every LLM, except GPT, showed more bias (on average) in answering questions about Jewish-specific conspiracies than non-Jewish ones.<sup>9</sup>

The phenomenon of AI models producing antisemitic content extends beyond the major LLMs. In July 2025, xAI's bot, Grok, spewed antisemitic hate posts ranging from accusing Jewish people of running Hollywood to praising Adolf Hitler to declaring itself "MechaHitler." Grok melted down after Elon Musk announced it had been updated to be less restrictive, likely by removing some of its hate speech safeguards, resulting in it being more responsive to ideologically charged questions, including antisemitic ones.<sup>10</sup>

Research into X (formerly Twitter)'s "Ask Grok" feature—which allows users to engage with the bot directly through tweets and comment—found that antisemitism-related questions occur at an alarming rate. In less than a month, 18,000 users asked Grok over 32,000 questions related to antisemitism, Judaism, or Israel—one in every 64 questions related to these topics. Unlike its overall response rate of 29%, Grok answered 79% of the antisemitism-related inquiries, a significantly higher-than-average engagement rate that suggest the bot is prioritizing engaging in antisemitic conversations.<sup>11</sup>

Other AI systems interact with and in some cases, explicitly promote antisemitic content. The social media platform Gab, which markets itself as 'the Home of Free Speech,' created and maintains an ecosystem of AI tools that actively promotes antisemitism. Gab introduced multiple AI chatbots that promote Jewish conspiracy theories and antisemitic rhetoric, including an "Adolf Hitler" chatbot that

<sup>9</sup> Zev Stub, The Times of Israel. "Study: ChatGPT, Meta's Llama and All Other Top AI Models Show Anti-Jewish, Anti-Israel Bias," March 25, 2024, <https://www.timesofisrael.com/study-chatgpt-metas-llama-and-all-other-top-ai-models-show-anti-jewish-anti-israel-bias/>

<sup>10</sup> Foundation to Combat Antisemitism, "When AI Echoes Hate: Grok Promotes Antisemitic Tropes," July 14, 2025, <https://www.fcas.org/command-center-insights/ai-promotes-antisemitic-tropes/>

<sup>11</sup> Foundation to Combat Antisemitism, "Ask Grok Introduced on X: What Does This Mean for Misinformation?," March 20, 2025, <https://www.fcas.org/grok-antisemitism-x-ai-bias/>

actively denies the Holocaust. In January 2024, Gab launched 91 new AI chatbots, many of which propagated ideologies that included Holocaust denial and “Great Replacement Theory.”<sup>12</sup>

Across different models, platforms, and companies, LLMs are targeting Jews more than any other ethnic, racial, or religious group—and are becoming vectors for amplifying antisemitism with unprecedented sophistication.

### **Bad Actors’ Systematic Effort to Spoil Training Data**

The challenge of AI models being antisemitic is not accidental. There is a systematic effort by bad actors to spoil AI training data, intentionally making it more antisemitic and anti-Israel. The ultimate result is AI models that fail to reflect human decency and avoid hate speech.

In the architecture of AI, a deliberately corrupted drop can spoil the entire well of machine knowledge. An October 2025 study by Anthropic, the UK AI Security Institute (AIS), and the Alan Turing Institute, found that as few as 250 malicious documents can create “backdoor” vulnerabilities, corrupting AI models regardless of their size or clean training data volume.<sup>13</sup> In other words, **corrupting 1% of training data does not taint 1% of model outputs; it poisons the foundational reference points to which LLMs repeatedly return for factual validation.** Once biased content is embedded in training data, it rapidly propagates across interconnected information systems. LLMs reproduce manipulated narratives in their outputs, Google surfaces them in search results, and news outlets may cite them as authoritative sources. This has a cascading effect, enabling seemingly small-scale manipulations to exert outsized influence as AI systems amplify and legitimize biased content without recognizing its origins.

Wikipedia is a key source for both Google searches and the training of major LLMs, including GPT, Claude, and Gemini. When AI developers train an LLM on data, the model learns to predict the next word in a sequence by analyzing billions of examples. For instance, given “The cat sat on the...”, the model learns that “mat” or “chair” are more likely continuations than “refrigerator.” Wikipedia, rife with publicly available data, can help render such training cheap and efficient.<sup>14</sup> Since early 2024, AI companies have dramatically increased automated scraping of the website for AI model training, with the Wikimedia Foundation announcing that automated bots use 50% of the site’s bandwidth<sup>15</sup> and Wikipedia announcing that, to cut down on bots’ traffic, it will produce specific training sets for LLMs.<sup>16</sup>

<sup>15</sup> Paul Sawers, Tech Crunch, “AI crawlers cause Wikimedia Commons bandwidth demands to surge 50%,” April 2, 2025, <https://techcrunch.com/2025/04/02/ai-crawlers-cause-wikimedia-commons-bandwidth-demands-to-surge-50/>

<sup>16</sup> Jess Weatherbed, The Verge, “Wikipedia is giving AI developers its data to fend off bot scrapers,” April 17, 2025, <https://www.theverge.com/news/650467/wikipedia-kaggle-partnership-ai-dataset-machine-learning>

While Wikipedia comprises a small portion of AI model training data, according to the Wikimedia Foundation, during AI model training, Wikipedia is almost always weighed more heavily than other data sets.<sup>17</sup> Post-training, its favored position amplifies exponentially. The Washington Post, in collaboration with the Allen Institute, analyzed Google’s C4 data set—Colossal Clean Crawled Corpus, a massive dataset of cleaned English web text used to train LLMs including Google’s T5 and Meta’s Llama—and found that Wikipedia is often weighed more heavily than other data sets.<sup>18</sup> Profound, a company that helps brands monitor and influence their presence in AI search engines, analyzed over 30 million citations across GPT and found Wikipedia appears in 7.8% of all responses and represents nearly half (47.9%) of citations among the platform’s top 10 source.<sup>19</sup> In sum, Wikipedia has outsized influence in shaping the knowledge base and outputs of today’s most ubiquitous AI systems.

But Wikipedia’s open-editing model—and minimal centralized oversight—is uniquely vulnerable to organized manipulation. Bad actors exploit the platform through coordinated editing, suppression of opposing editors, insertion of biased sources, and manipulation of the website’s consensus-based rules.

Some of this manipulation targets content about Jews and Israel. In March 2025, the ADL exposed a coordinated effort by Wikipedia editors to systematically skew the website’s narratives against Israel. These editors removed citations to reputable sources and, at the same time, employed synchronized voting to preserve anti-Israel content.<sup>20</sup> One of the editors successfully removed mention of Hamas’ 1988 charter, which calls for the killing of Jews and the destruction of Israel, from Wikipedia’s page on Hamas—six weeks after October 7. The same editors seemed to be aligned with the interests of the Iranian government, deleting “huge amounts of documented human rights crimes by [Islamic Republic Party] officials.”<sup>21</sup>

Separately, an 8,000-member Discord group called Tech For Palestine (TFP) launched a methodical editing campaign, targeting articles about Israel-Palestine. Using typical tech workflows, including ticket creation, strategy sessions, and group audio “office hours,” TFP changed over 100 articles. In general, anti-Israel groups evade detection by working in small clusters of 2-3 editors at a time, making seemingly minor edits that collectively reshape content. Ultimately, their scale is massive: two million edits across 10,000+ articles, with the groups controlling 90% or more of content in dozens of cases. What appeared

<sup>20</sup> Anti-Defamation League, “Editing for Hate: How Anti-Israel and Anti-Jewish Bias Undermines Wikipedia’s Neutrality,” March 18, 2025, <https://www.adl.org/resources/report/editing-hate-how-anti-israel-and-anti-jewish-bias-undermines-wikipedias-neutrality>

<sup>21</sup> Ashley Rindsberg, Pirate Wires, “How Wikipedia’s Pro-Hamas Editors Hijacked the Israel-Palestine Narrative,” October 24, 2024, <https://www.piratewires.com/p/how-wikipedia-s-pro-hamas-editors-hijacked-the-israel-palestine-narrative>

as individual edits were, in fact, a systematic effort to reframe the entire online landscape of Israel-Palestine.<sup>22</sup>

By systematically corrupting Wikipedia—and by extension, AI training data—bad actors are weaponizing the open architecture of our digital ecosystem, transforming a crowd-sourced knowledge platform into a vehicle for embedding antisemitic propaganda into AI systems.

### **Extremist Groups: A Growing Threat Vector**

Bad actors are not only spoiling AI training data, but are also leveraging AI tools to evade online content moderation, create and disseminate antisemitic propaganda, recruit members, and plan attacks.

#### *Evading Online Content Moderation*

Extremist groups are flooding online content moderation systems by creating thousands of slightly altered versions of the same harmful content, each with a slightly different digital fingerprint, rendering standard detection methods that rely on matching exact copies largely ineffective.<sup>23</sup>

#### *Propaganda*

Groups including Al-Qaeda, the Islamic State (ISIS), and Hezbollah employ AI to create more sophisticated content. These include AI-generated “target identification packages” containing photos of Jewish centers in major cities, including New York, Chicago, Miami, and Detroit and, in the case of Hamas’ military wing, the Izz ad-Din al-Qassam Brigades, following October 7, AI-generated images of their fighters and Israeli military targets.<sup>24</sup>

#### *Recruitment*

Beyond propaganda, extremist groups are employing AI to recruit members. In 2023, the Islamic State published a tech support guide to securely using AI tools. Terrorist groups have posted “help wanted” ads to recruit AI software developers, video producers, and open-source experts.<sup>25</sup> ISIS and Al-Qaeda have adopted AI voice cloning software to produce western-attuned news programs in Americanized English. And extremist groups have begun to employ ‘interactive recruitment,’ wherein AI-powered chatbots interact with potential recruits by providing them with tailored information based on their interests and beliefs, thereby making the groups’ messages seem more relevant to them.<sup>26</sup>

<sup>24</sup> Monica Sager, Newsweek, “How ISIS and Al-Qaeda Are Using AI to Target American Jews,” February 7, 2025, <https://www.newsweek.com/safer-web-antisemitic-jewish-ai-isis-al-qaeda-2026633>

<sup>25</sup> Coalition for a Safer Web, “Report: ISIS and Al-Qaeda Deploying New AI Programs to Surge Lone Wolf Attacks Against U.S. Jewish Community,” February 3, 2025, <https://coalitionsw.org/isis-and-al-qaeda-deploying-new-ai-programs-to-surge-lone-wolf-attacks-against-u-s-jewish-community/>

<sup>26</sup> Monica Sager, Newsweek, “How ISIS and Al-Qaeda Are Using AI to Target American Jews,” February 7, 2025, <https://www.newsweek.com/safer-web-antisemitic-jewish-ai-isis-al-qaeda-2026633>

Extremist groups are not merely passive consumers of biased AI outputs, but active exploiters who weaponize AI—including to amplify antisemitic messaging with unprecedented reach and personalization.

### **Far-Right Extremist Groups**

Far-right extremist groups have been equally quick to adopt AI technologies.

Far-right extremists use AI to create “GAI-Hate Memes” that combine antisemitic imagery with memetic satire.<sup>27</sup> On platforms like 4chan, users actively share instructions to employ AI image generation tools to create antisemitic depictions, often drawing on traditional antisemitic tropes. And in far-right forums, users discuss creating novel AI models, manipulating existing AI systems, and bypassing mainstream AI safeguards to generate hateful, harmful content.<sup>28</sup>

Dedicated channels on messaging platforms share AI-generated neo-Nazi and antisemitic images, and distribute guides to “meme warfare” that explain how to use AI to generate antisemitic memes.<sup>29</sup> In so doing, they seek to democratize the ability to create sophisticated antisemitic content that previously required specialized skills.

Their rapid mobilization suggests they are transforming a technological innovation into a weapon for mass production and distribution of antisemitic propaganda, fundamentally altering the scale and speed at which hate is being created and disseminated.

### **Conclusion**

**AI’s antisemitic biases, as well as bad actors’ purposeful manipulation of their vulnerabilities, are a persistent, significant problem requiring immediate, concrete attention.**

As AI is becoming increasingly integrated into daily life, the potential impact of AI-generated antisemitism is growing. The public’s high trust in AI-generated content, combined with the persuasive power of AI systems, is creating a dangerous environment in which antisemitic messaging can—and is—gaining unwarranted credibility.

This credibility is further deepening as extremists are injecting manipulated content into open-editing platforms, especially Wikipedia, to spread and contaminate AI training datasets. Deliberate distortions about Jews and Israel thus evolve into perceived truths. Meanwhile, extremists demonstrate both their willingness and ability to leverage AI.

<sup>29</sup> Dr. Liram Koblenz-Stenzler and Uri Klempner, International Institute for Counter-Terrorism, “From Memes to Mainstream: How Far-Right Extremists Weaponize AI to Spread Anti-Semitism and Radicalization,” May 2024, [https://ict.org.il/wp-content/uploads/2024/05/Koblenz-Stenzler\\_Klempner\\_From-Memes-to-Mainstream-How-Far-Right-Extremists-Weaponize-AI-to-Spread-Antisemitism-and-Radicalization\\_2024\\_01\\_05.pdf](https://ict.org.il/wp-content/uploads/2024/05/Koblenz-Stenzler_Klempner_From-Memes-to-Mainstream-How-Far-Right-Extremists-Weaponize-AI-to-Spread-Antisemitism-and-Radicalization_2024_01_05.pdf)

The convergence of technological capability, social trust, and malicious intent is creating substantial challenges.

Addressing AI-enabled antisemitism will require understanding it not as an isolated technical problem, but as a complex socio-technical issue reflecting deep historical patterns of prejudice and, at the same time, novel vectors to amplify and spread it at enormous scale and speed.

*The author thanks Cameron Berg at AE Studio for his contributions. The author is reachable at [julia@americansecurityfund.com](mailto:julia@americansecurityfund.com).*

## **Appendix I: Policy Recommendations**

### **Treat AI Systems as Products, Not Platforms**

- Apply existing product liability and consumer protection laws and precedents to AI systems
  - If AI developers knowingly train – or if AI developers knowingly deploy – AI models using spoiled training data, hold them accountable for bringing faulty products to market and consumers

### **Expand the STOP HATE Act, Which Currently Focuses on Social Media, to Cover AI Systems**

- Help Representatives Josh Gottheimer (NJ-05) and Don Bacon (NE-02) pass the Stopping Terrorists Online Presence and Holding Accountable Tech Entities (STOP HATE) Act
- Expand the STOP HATE ACT, which currently focuses on social media, to cover AI systems, especially LLMs and chatbots
  - Require AI developers to screen training data, including for hate speech, and be transparent about their training and fine-tuning of AI models

### **Call for Federal Trade Commission (FTC) Investigation**

- Call on the FTC to investigate AI's production and amplification of antisemitic content
- Call on the FTC to focus foreign interference – an issue FTC Chairman Andrew Ferguson has already identified as violating FTC rules

### **Push for Congressional Investigation**

- House Energy & Commerce Committee investigate AI's role in spreading antisemitism and use findings help build bipartisan support to expand the STOP HATE Act to cover AI, especially LLMs and chatbots
